Informations générales

STS(Steroid sulfatase) is also named as ASC(aryl)sulfatase C, ARSC1 and belongs to the sulfatase family. It is expressed in human liver and is responsible for the hydrolysis of many estrogen and hydroxysteroid sulfates, including dehydroepiandrosterone (DHEA)-sulfate and β-estradiol(E2)-3-sulfate(PMID:19589875). This enzyme has also been documented to occur in many other tissues, including skin, lung, ovary, and adrenal gland. The estimated molecular mass of expressed human STS is 63-85 kDa which may represent different levels of glycosylation in the different tissues, as STS is known to be a glycoprotein and the full length protein has a signal peptide with 21 amino acids(PMID:17604157).
