Informations générales

Runt-related transcription factor 1 (RUNX1), also named as AML1 or CBF alpha 2, is 453 amino acid protein, which contains one Runt domain. RUNX1 localizes in the nucleus and is expressed in all tissues except brain and heart. RUNX1 is involved in hematopoiesis and is frequently targeted in human leukemia by chromosomal translocations that fuse the DNA-binding domain of RUNX1 to other transcription factors and corepressor molecules. In addition to its role in leukemogenesis, RUNX1 is also involved in sensory neuron diversification. RUNX1 exists some isoforms with range of MV 20-52 kDa. The calculated molecular weight of isoforms 1 is 49 kDa, but the modified protein is about 49-55 kDa. This antibody (19555-1-AP) can't recognize 37 kDa isoform 11.
