## Informations générales

MCT1, the SLC16A1 gene product, is a trans-membrane symporter involved in lactate and pyruvate transportation. It plays an important role in lactic acid transport and H<sup>+</sup> clearance in cancer cells. MCT overexpression had been observed in various cancers and may play an important role in tumorigenesis. Two isoforms of MCT1 exist due to the alternative splicing, with predicted MW of 54 kDa and 46 kDa, respectively. While western blot analysis detected MCT1 at an apparent molecular mass of 40-50 kDa.
