## Informations générales

GLUT2 is a member of glucose transporters or GLUTs which catalyze the glucose transport across plasma membrane. GLUT2 is selectively expressed in hepatocytes, pancreatic beta cells, and absorptive renal and intestinal epithelial cells. GLUT2 is required to maintain normal glucose homeostasis and normal function and development of the endocrine pancreas. Its absence leads to symptoms characteristic of non-insulin-dependent diabetes mellitus. This antibody detected 60-70 kDa fully glycosylated, matured GLUT2 and a nonglycosylated form of GLUT2 around 38-45 kDa. (9354799, 12101013)
