Informations de base

Numéro de catalogue:	20654-1-AP	Numéro d'acquisition GenBank:	NM_003073	Méthode de purification:
Taille:	150ul , Concentration: 550 µg/ml by Nanodrop and 460 µg/ml by Bradford method using BSA as the standard;	Identification du gène (NCBI):	6598	Purification par affinité contre l'antigène
Hôte:	Lapin	Nom complet:	SWI/SNF related, matrix associated, actin dependent regulator of chromatin, subfamily b, member 1	Dilutions recommandées:
Isotype:	IgG	MW calculé	44 kDa	WB 1:500-1:2000 IP 0.5-4.0 ug for IP and 1:500-1:1000 for WB IHC 1:20-1:200
		MW observés:	40-45 kDa	

Applications

Applications testées:	IHC, IP, WB, ELISA	Contrôles positifs:
Demandes citées:		WB : cellules HepG2, cellules K-562
IF, WB		IP : cellules K-562,
Spécificité de l'espèce:	Humain	IHC : tissu de lymphome humain, tissu de cancer de la prostate humain
Espèces citées:	Humain	

Remarque-IHC: il est suggéré de démasquer l'antigène avec un tampon de TE buffer pH 9,0; (*) À défaut, 'le démasquage de l'antigène peut être effectué avec un tampon citrate pH 6,0.

Informations générales

SMARCB1, also named as BAF47, INI1 and SNF5L1, belongs to the SNF5 family. It is a core component of the BAF (hSWI/SNF) complex. The BAF complex is able to create a stable, altered form of chromatin that constrains fewer negative supercoils than normal. SMARCB1 stimulates in vitro the remodeling activity of SMARCA4/BRG1/BAF190A. It is involved in activation of CSF1 promoter. SMARCB1 belongs to the neural progenitors-specific chromatin remodeling complex (npBAF complex) and the neuron-specific chromatin remodeling complex (nBAF complex). During neural development a switch from a stem/progenitor to a post-mitotic chromatin remodeling mechanism occurs as neurons exit the cell cycle and become committed to their adult state. SMARCB1 plays a key role in cell-cycle control and causes cell cycle arrest in G0/G1. It is also involved in vitamin D-coupled transcription regulation via its association with the WINAC complex, a chromatin-remodeling complex recruited by vitamin D receptor (VDR), which is required for the ligand-bound VDR-mediated transrepression of the CYP27B1 gene. Defects in SMARCB1 are a cause of rhabdoid tumor (RDT) which also known as malignant rhabdoid tumor (MRT). Defects in SMARCB1 are a cause of schwannomatosis. The antibody is specific to SMARCB1.

Stockage

Stockage:

Stocker à -20°C. Stable pendant un an après l'expédition.

Tampon de stockage:

PBS avec azoture de sodium à 0,02 % et glycérol à 50 % pH 7,3

L'aliquotage n'est pas nécessaire pour le stockage à -20C

*** Les 20ul contiennent 0,1% de BSA.

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

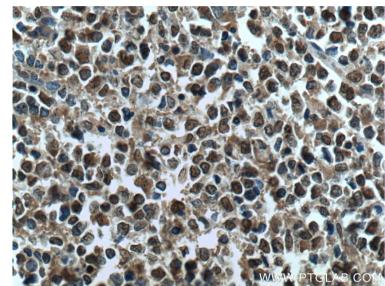

Données de validation sélectionnées

HepG2 cells were subjected to SDS PAGE followed by western blot with 20654-1-AP (SMARCB1 antibody) at dilution of 1:500 incubated at room temperature for 1.5 hours.

IP Result of anti-SMARCB1 (IP:20654-1-AP, 4ug; Detection:20654-1-AP 1:500) with K-562 cells lysate 3200ug.
