Informations générales

C1orf106 (also known as innate immunity activator, INAVA) has thus far been considered to play a significant role in intestinal inflammatory diseases. C1orf106 is highly expressed in the human intestine and intestinal epithelial cell lines but expressed at low levels in myeloid cells and mouse bone marrow-derived macrophages (PMID: 29420262). Recent studies have also shown that C1orf106 protects against colitis by stabilizing E-cadherin and bridges mucosal barrier function with inflammatory signaling (PMID: 31376015).
