Informations générales

CDK2(Cyclin-dependent kinase 2) is also named as CDKN2 and belongs to the protein kinase superfamily. It is dispensable for myelination but is important for adult oligodendrocyte progenitor cell renewal, and could be one of the underlying mechanisms that drive adult progenitors to differentiate and thus regenerate myelin(PMID:21502361). G2 phase CCNA1/CDK2 controls the timing of entry into mitosis by controlling the subsequent activation of CCNB1/CDK1, but also has an unexpected role in coordinating the activation of CCNB1/CDK1 at the centrosome and in the nucleus(PMID:18372919). It has 2 isoforms produced by alternative splicing with the molecular weight of 34 kDa and 30 kDa.
