Informations générales

Interleukin-4 Induced Gene 1 (IL4l1) is a secreted L-phenylalanine oxidase mainly produced by inflammatory antigen-presenting cells-in particular, macrophages present in T helper type 1 granulomas and in various types of tumors. In the last decade, it has been shown that IL4l1 is involved in the fine control of B- and T-cell adaptive immune responses. Preclinical models have revealed its role in cancer immune evasion. Recent clinical data highlight IL4l1 as a new potential prognostic marker in human melanoma. As a secreted enzyme, IL4l1 may represent an easily targetable molecule for cancer immunotherapy. IL4l1 protein has an estimated molecular weight of 75 kDa. (PMID: 31330829, PMID: 21469114)
