Informations générales

CCDC123(as known as CEP123), also named as CEP89, is a new player in the process of primary ciliogenesis and it also plays a role in mitochondrial metabolism where it may modulate complex IV activity. It has been shown that CEP123 is localized to the distal appendages of the mother centriole and the localization of CEP123 is cell cycle-dependent with its levels decreasing during mitosis. CEP123 depletion can cause defects in ciliary vesicle formation and prevent the formation of a ciliary vesicle at the distal end of the mother centriole. It is possible that CEP123 is involved in regulating the recruitment of membranes to the centrosome through its interaction with Cep290(PMID:23575228, 23789104, 23348840). 24002-1-AP antibody recognizes all of CEP123 isoforms.

Données de validation sélectionnées

SH-SY5Y cells were subjected to SDS PAGE followed by western blot with 24002-1-AP (CEP89 antibody) at dilution of 1:300 incubated at room temperature for 1.5 hours.

Neuro-2a cells were subjected to SDS PAGE followed by western blot with 24002-1-AP (CEP89 antibody) at dilution of 1:300 incubated at room temperature for 1.5 hours.

Immunofluorescent analysis of (-20°C Ethanol) fixed U-251 cells using 24002-1-AP (CEP89 antibody) at dilution of 1:50 and Alexa Fluor 488-Conjugated AffiniPure Goat Anti-Rabbit IgG(H+L).
