Informations générales

GRAMD4 also termed as Death inducing protein is a 578 amino-acid protein, which contains 1 GRAM domain. GRAMD4 as a multi-pass membrane protein localizes in the Mitochondrion membrane. Overexpression of GRAMD4 results in a strong apoptotic response involving caspase-3 activation and cleavage of poly(ADP-ribose)-polymerase. GRAMD4 is expressed in lung and in primary Lung squamous cell carcinoma (LSCC) and shows up-regulation in mitochondria by E2F-1 after addition of 4-hydroxytamoxifen. This evidence suggests that GRAMD4 may be a potential target for cancer therapies. Full-length GRAMD4 expresses a protein of 66 kDa, whereas the 255 bp-deletion mutant expresses a protein of 56 kDa (PMID: 21127500).
