Informations générales

FYTTD1 also termed as UAP56 interacting factor or UIF is a 318 amino acid protein, which belongs to the UIF family. FYTTD1 localizes to nucleus and is required for mRNA export from nucleus to cytoplasm. Functioning as an adaptor, FYTTD1 utilizes the BAT1/DDX39-TAP pathway, which is essential for efficient mRNA export and nuclear pore delivery. FYTTD1 interacts with SSRP1, a protein that is necessary for its recruitment of mRNAs, in addition to a mutually exclusive interaction with BAT1/DDX39 and TAP. The molecular weight of post-translation modified FYTTD1 is observed 50 kDa.
