Informations générales

FCRL5, also known as CD307 or IRTA2, is a surface protein expressed selectively on B cells and plasma cells (PMID: 11290337). This protein has both an immunoreceptor tyrosine-based activation motif (ITAM)-like sequence and two consensus immunoreceptor tyrosine-based inhibitory motifs (ITIM) in its cytoplasmic region (PMID: 17522256). FCRL5 is implicated in B cell development and lymphomagenesis (PMID: 11290337; 11453668). It may have an immunoregulatory role in marginal zone B-cells.
