Informations générales

Latent TGFβ binding protein 1 (LTBP1) is a large extracellular protein which belongs to the family of latent TGF-beta binding proteins (LTBPs). LTBP1 is essential for TGF-beta folding, secretion, matrix localization and activation. LTBP1 has also been demonstrated to interact with a number of insoluble extracellular matrix components, such as fibrillin. We got 150-240 kDa in western blotting due to protein glycosylation of LTBP1 (PMID: 18086923, PMID: 9923648).
