Informations générales

ATP1A3 participates in the catalytic hydrolysis of ATP and the exchanging of sodium and potassium ions across plasma membrane. The catalytic activity mode is $ATP + H_2O \rightarrow ADP + phosphate + Na^+(Out) + K^+(In)$. It has been published that the neurologic disorders rapid-onset dystonia-parkinsonism (RDP), alternating hemiplegia of childhood (AHC) and CAPS syndrome (cerebellar ataxia, areflexia, pes cavus, optic atrophy and sensorineural hearing loss) are all related with the mutation of ATP1A3. There are other reports suggest that early life epilepsy and episodic apnea revealing are potentially associated with the mutation of ATP1A3 as a result of impairment of Na/K homeostasis. This antibody is generated against the middle region (378-580aa) of ATP1A3 and detects 113 kDa protein in SDS-PAGE.(PMID: 30097153, 20301294, 29922587)

Données de validation sélectionnées

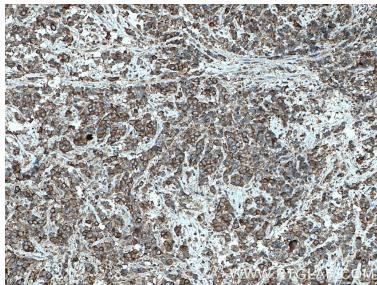

Immunofluorescent analysis of (-20°C Ethanol) fixed HeLa cells using 28030-1-AP (ATP1A3 (middle) antibody) at dilution of 1:50 and Coralite®88-Conjugated AffiniPure Goat Anti-Rabbit IgG(H+L).

HeLa cells were subjected to SDS PAGE followed by western blot with 28030-1-AP (ATP1A3 antibody) at dilution of 1:2000 incubated at room temperature for 1.5 hours.

Various lysates were subjected to SDS PAGE followed by western blot with 28030-1-AP (ATP1A3 (middle) antibody) at dilution of 1:14000 incubated at room temperature for 1.5 hours.

Immunohistochemical analysis of paraffin-embedded human prostate cancer tissue slide using 28030-1-AP (ATP1A3 antibody) at dilution of 1:200 (under 10x lens. Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
