Informations générales

MTOR, also named as FRAP1, FRAP, FRAP2 and RAPT1, belongs to the PI3/PI4-kinase family. MTOR is a Ser/Thr protein kinase that functions as an ATP and amino acid sensor to balance nutrient availability and cell growth. MTOR is kinase subunit of both mTORC1 and mTORC2, which regulate cell growth and survival in response to nutrient and hormonal signals. mTORC1 is activated in response to growth factors or amino-acids. mTORC2 is also activated by growth factors, but seems to be nutrient-insensitive. mTORC2 seems to function upstream of Rho GTPases to regulate the actin cytoskeleton, probably by activating one or more Rho-type guanine nucleotide exchange factors. mTORC2 promotes the serum-induced formation of stress-fibers or F-actin. MTOR has a calculated molecular mass of 289 kDa, and always can be detected at about 250 kDa due to some modifications (PMID: 14578359).

Données de validation sélectionnées

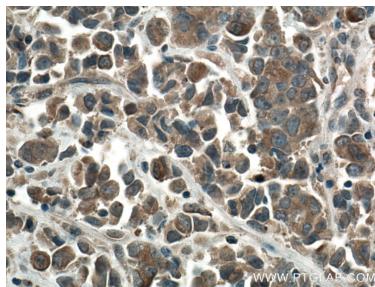

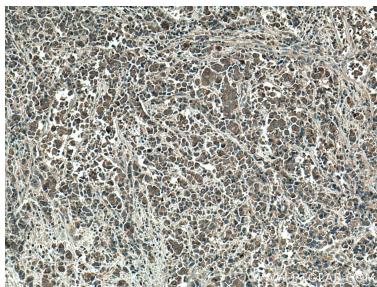

WB result of mTOR antibody (28273-1-AP; 1:4000; incubated at room temperature for 1.5 hours) with sh-Control and sh-mTOR transfected HeLa cells.

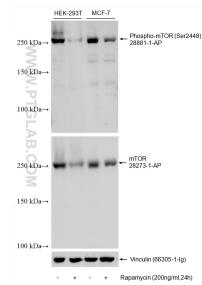

Various lysates were subjected to SDS PAGE followed by western blot with 28273-1-AP (mTOR antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours.

IP result of anti-mTOR(IP:28273-1-AP, 4ug; Detection:28273-1-AP 1:5000) with HeLa cells lysate 1720 ug.

Immunofluorescent analysis of (-20°C Ethanol) fixed HeLa cells using mTOR antibody (28273-1-AP) at dilution of 1:200 and Coralite® 488-Conjugated AffiniPure Goat Anti-Rabbit IgG(H+L), CL594-Phalloidin (red).

Non-treated and Rapamycin treated lysates were subjected to SDS PAGE followed by western blot with 28881-1-AP (Phospho-mTOR (Ser2448) antibody) at dilution of 1:2000 incubated at room temperature for 1.5 hours. The membrane was stripped and re-blotted with mTOR antibody (28273-1-AP) and Vinculin (66305-1-Ig) subsequently.
