Informations générales

The protein SPATA2 (spermatogenesis-associated protein 2) was initially shown to be highly expressed in testicular Sertoli cells, and these early reports suggested SPATA2 to play a role in spermatogenesis. More recently, it was discussed to be involved in the predisposition for psoriasis. SPATA2 is required for TNF-induced cell death. SPATA2 has a potential role during pancreatic development and β-cell proliferation.(PMID: 20119533/ PMID: 27458237)
