Informations générales

GATA1 is first identified as a member of the GATA transcription factor family, whose members bind the consensus (WGATAR) binding motif [PMID:22937757]. GATA1, a zinc finger DNA-binding transcription factor, plays a critical role in the normal development of hematopoietic cell lineages. The protein contains an N-terminal region that confers transcriptional activity and a C-terminal domain that mediates binding to DNA and other factors [PMID: 8524811]. GATA-1 is also implicated in regulating the expression of the erythroid and megakaryocytic-specific genes [PMID:22937757].

Données de validation sélectionnées

Various lysates were subjected to SDS PAGE followed by western blot with 60011-1-g (GATA1 antibody) at dilution of 1:4000 incubated at room temperature for 1.5 hours.

Immunohistochemical analysis of paraffin-embedded human breast hyperplasia tissue slide using 60011-1-g (GATA1 antibody) at dilution of 1:800 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

1×10^6 Jurkat cells were stained with 0.20ug GATA1 antibody (60011-1-g, red) and control antibody (blue). Fixed with 90% MeOH.
