

À des fins de recherche uniquement

Anticorps Monoclonal anti-EPHA1-special

Numéro de catalogue: 60155-3-Ig

Informations de base

Numéro de catalogue:

60155-3-Ig

Taille:

150ul

Hôte:

Mouse

Isotype:

IgG1

Numéro d'acquisition GenBank:

BC130291

Identification du gène (NCBI):

2041

Nom complet:

EPH receptor A1

MW calculé

108 kDa

Méthode de purification:

Précipitation de l'acide caprylique/du sulfate d'ammonium

CloneNo.:

5F9G11

Applications

Applications testées:

ELISA

Spécificité de l'espèce:

Humain

Informations générales

EPHA1, also named as EPH, EPHT and EPHT1, belongs to ephrin receptor subfamily of the protein-tyrosine kinase family. EPH and EPH-related receptors have been implicated in mediating developmental events, particularly in the nervous system. Receptors in the EPH subfamily typically have a single kinase domain and an extracellular region containing a Cys-rich domain and 2 fibronectin type III repeats. Ligands in the ephrin-A subclass, including the prototype family member ephrin-A1 (B61), are membrane associated through glycosylphosphatidyl-inositol linkages, whereas ephrin-B subclass consists of ligands with transmembrane domains. The general role of the Eph family is in mediating repulsive cell-cell interaction.

Stockage

Stockage:

Stocker à -20°C. Stable pendant un an après l'expédition.

Tampon de stockage:

PBS avec azoture de sodium à 0,02 % et glycérol à 50 % pH 7,3

L'aliquotage n'est pas nécessaire pour le stockage à -20C

***** Les 20ul contiennent 0,1% de BSA.**
