Anticorps Monoclonal anti-CD11c

Numéro de catalogue: 65086-1-Ig

Informations de base

Numéro de catalogue: 65086-1-Ig	Numéro d'acquisition GenBank: BC038237	Méthode de purification: Purification par affinité
Taille: 100ug, 0.5 mg/ml	Identification du gène (NCBI): 3687	CloneNo.: 3.9
Hôte: Mouse	Nom complet: integrin, alpha X (complement component 3 receptor 4 subunit)	
Isotype: IgG1, kappa	MW calculé 1169 aa, 129 kDa	

Applications

Applications testées:
FC

Spécificité de l'espèce:
Humain

Informations générales

Integrins are cell adhesion receptors that are heterodimers composed of non-covalently associated α and β subunits (PMID: 9779984). CD11c, also known as integrin αX , is a type I transmembrane glycoprotein present on a variety of cells, including monocytes/macrophages, granulocytes, a subset of B cells, NK cells and dendritic cells (PMID: 2897326; 1680915; 1694698; 17389580). As a result of its high level of expression on most dendritic cells, CD11c is typically considered to be a marker of conventional dendritic cells (PMID: 27119555). CD11c forms an α/β heterodimer with CD18 (integrin $\beta 2$). CD11c/CD18 acts a receptor for fibrinogen and is important in monocyte adhesion and chemotaxis (PMID: 1671533).

Stockage

Stockage:
Store at 2-8°C. Stable for one year after shipment.

Tampon de stockage:
PBS with 0.09% sodium azide.

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

Données de validation sélectionnées

1X10⁶ human PBMCs were surface stained with 0.2 ug Anti-Human CD11c (65086-1-Ig, Clone:3.9) labeled with FlexAble CoraLite® Plus 647 Antibody Labeling Kit for Mouse IgG1 (KFA023) (red) or unstained. Cells were not fixed. Monocytes were gated.
