Informations générales

Foxp3 (forkhead box P3), also named as IPEX, JM2 and scurf, is a member of the forkhead transcription factor family and is essential for normal immune homeostasis (PMID: 11138001; 20429413). Foxp3 is specifically expressed in CD4+ CD25+ regulatory T cells and is crucial for their development and suppressive activity (PMID: 12612578; 12612581). In scurf mouse, disruption of Foxp3 results in the fatal lymphoproliferative disorder attributed to the lack of an immune-suppressive component in the immune system (PMID: 25683611; 11138001). Similar to mice, genetic defects in human Foxp3 are the cause of immunodeficiency polyendocrinopathy, enteropathy, X-linked syndrome (IPEX) which also known as X-linked autoimmunity-immunodeficiency syndrome (PMID: 11137993).

Données de validation sélectionnées

1x10⁶ mouse splenocytes were intracellularly stained with 0.5 ug Anti-Mouse Foxp3 (65089-1-Ig, Clone:3G3) and FITC anti-Mouse IgG1 Antibody at dilution 1:50, or stained with 0.5 ug mouse IgG1 isotype control and FITC anti-Mouse IgG1 Antibody at dilution 1:50. Cells were fixed and permeabilized with Transcription Factor Staining Buffer Kit (PF00011).

Immunohistochemical analysis of paraffin-embedded mouse spleen tissue slide using 65089-1-Ig (Foxp3 antibody) at dilution of 1:200 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
