Informations générales

Calponin is a family of actin filament-associated proteins which regulate smooth muscle cell contraction. Three isoforms of calponin exist: calponin h1 (CNN1), calponin h2 (CNN2) and calponin 3 (CNN3). Calponin 1 and calponin 2 are predominately expressed in smooth muscle cells and cardiac muscle cells, respectively. Calponin 3 is highly expressed in many tissues including articular cartilage and brain.

Données de validation sélectionnées

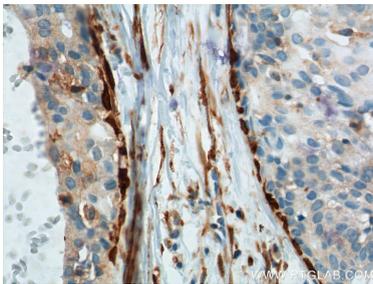

WB result of CNN2 antibody (66244-1-Ig; 1:1000; incubated at room temperature for 1.5 hours) with sh-Control and sh-CNN2 transfected HeLa cells.

HepG2 cells were subjected to SDS PAGE followed by western blot with 66244-1-Ig (CNN2 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. The membrane was stripped and reblotted with HRP-conjugated Alpha Tubulin Monoclonal antibody (HRP-66031) as loading control.
