## Informations générales

WNT1 is a member of the WNT gene family. WNT1 have been implicated in oncogenesis and in several developmental processes, including regulation of cell fate and patterning during embryogenesis. The studies in mouse indicate that the Wnt1 protein functions in the induction of the mesencephalon and cerebellum. This gene was originally considered as a candidate gene for Joubert syndrome, an autosomal recessive disorder with cerebellar hypoplasia as a leading feature. However, further studies suggested that the gene mutations might not have a significant role in Joubert syndrome.
