## Informations générales

Glucose-6-phosphatase- $\alpha$  (G6PC) is a key enzyme in glucose homeostasis that catalyzes the hydrolysis of glucose-6-phosphate to glucose and phosphate in the terminal step of gluconeogenesis and glycogenolysis. G6PC activity is restricted to the liver, the kidney cortex and the small intestine and confers on these three organs the capacity to release glucose into the systemic circulation (PMID: 21983240). The encoded enzyme is anchored to the ER by nine transmembrane helices with the amino (N)-terminus in the lumen and the carboxyl (C)-terminus in the cytoplasm (PMID: 15542400).

## Données de validation sélectionnées

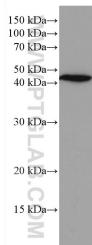

Various lysates were subjected to SDS PAGE followed by western blot with 66860-1-Ig (G6PC antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours. The membrane was stripped and reblotted with HRP-conjugated GAPDH Monoclonal antibody (HRP-60004) as loading control.

Immunohistochemical analysis of paraffin-embedded human liver tissue slide using 66860-1-Ig (G6PC antibody) at dilution of 1:200 (under 10x lens. Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
