Informations générales

Profilin-1 (PFN1) plays an important role in the control of actin dynamics, and could represent an important therapeutic target in several diseases. PFN1 is identified as a huntingtin aggregation inhibitor, and may serve as a tumor-suppressor. PFN1 is crucial for the conversion of monomeric (G)-actin to filamentous (F)-actin. Amyotrophic lateral sclerosis (ALS) is a late-onset neurodegenerative disorder resulting from motor neuron death. Cells expressing PFN1 mutants contain ubiquitinated, insoluble aggregates that in many cases contain the ALS-associated protein TDP-43. Recently, PFN1 is a potential biomarker for bladder cancer aggressiveness and may be of great clinical importance.

Données de validation sélectionnées

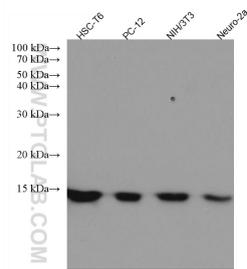

Various lysates were subjected to SDS PAGE followed by western blot with 67390-1-Ig (Profilin 1 antibody) at dilution of 1:20000 incubated at room temperature for 1.5 hours. The membrane was stripped and reblotted with HRP-conjugated GAPDH Monoclonal antibody (HRP-60004) as loading control.

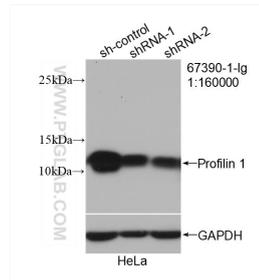

HAP1 WT cells (green outline) and PFN1 KO cells (magenta outline) labelled with a green or a far-red fluorescence dye, respectively. Cells with 4% PFA and stained with 67390-1-Ig at 1.0 μg/ml plus DAPI. Bars = 10 μm. Immunofluorescent analysis of (-20°C Methanol) fixed HeLa cells using Profilin 1 antibody (67390-1-Ig, Clone: 3A12E8) at dilution of 1:800 and CoraLite®488-Conjugated AffiniPure Goat Anti-Mouse IgG(H+L).
