## Informations générales

PSMA3(Proteasome subunit alpha type-3) is also named as HC8, PSC8 and belongs to the peptidase T1A family. The proteasome is a multicatalytic protease complex that catalyzes an energy-dependent, extralysosomal proteolytic pathway responsible for selective elimination of proteins with aberrant structures and naturally occurring short-lived proteins related to metabolic regulation and cell cycle progression. It has 2 isoforms produced by alternative splicing.
