Anticorps Monoclonal anti-CD206

Numéro de catalogue: **APC-65155**

1 Publications

Informations de base

Numéro de catalogue:	APC-65155	Numéro d'acquisition GenBank:	NM_002438	Méthode de purification:
Taille:	100tests , 10 µl/test	Identification du gène (NCBI):	4360	L'anticorps purifié est conjugué à l'allophycocyanine (APC) dans des conditions optimales. Le conjugué est purifié par chromatographie d'exclusion de taille.
Hôte:	Mouse	Nom complet:	mannose receptor, C type 1	CloneNo.:
Isotype:	IgG1, kappa	MW calculé	166 kDa	15-2
		Excitation/Emission maxima wavelengths:		650 nm / 660 nm

Applications

Applications testées:
FC

Demandes citées:
FC

Spécificité de l'espèce:
Humain

Informations générales

CD206, also named as MMR, CLEC13D and MRC1, is a type I membrane receptor that mediates the endocytosis of glycoproteins by macrophages. CD206 has been shown to bind high-mannose structures on the surface of potentially pathogenic viruses, bacteria, and fungi so that they can be neutralized by phagocytic engulfment. CD206 is a 170 kDa transmembrane protein which contains 5 domains: an amino-terminal cysteine-rich region, a fibronectin type II repeat, a series of eight tandem lectin-like carbohydrate recognition domains (responsible for the recognition of mannose and fucose), a transmembrane domain, and an intracellular carboxy-terminal tail. It is expressed on most tissue macrophages, in vitro derived dendritic cells, lymphatic and sinusoidal endothelia.

Stockage

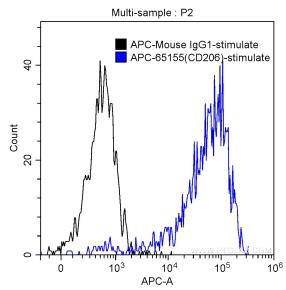

Stockage:
Store at 2-8°C. Avoid exposure to light. Stable for one year after shipment.
Tampon de stockage:
PBS avec azoture de sodium à 0,1 %.

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

Données de validation sélectionnées

Human monocyte-derived dendritic cells (monocytes stimulated with GM-CSF and IL-4) were surface stained with 10 μ l APC Anti-Human CD206 (APC-65155, Clone:15-2) (blue) or APC-Mouse IgG1 isotype control (black). Cells were not fixed.
