Informations générales

Thymidylate synthase gene (TYMS) encodes thymidylate synthase (TS) which is an important factor in the growth of tumor cells. TS can catalyze the transformation of intracellular uridine monophosphate (UMP) into dTMP which is required for DNA replication and repairing. TS is a key enzyme in the process of cell proliferation, also is the important target enzymes of 5-FU and other chemotherapy drugs. The expression of TYMS is negatively correlated with the efficacy of chemotherapy and the prognosis of patients who suffer from rectal cancer, breast cancer, colorectal cancer, gastric cancer, head and neck cancer, esophageal cancer, pancreatic cancer and so on.

Données de validation sélectionnées

Immunofluorescent analysis of (4% PFA) fixed HeLa cells using CoraLite®555 Thymidylate synthase antibody (CL555-15047) at dilution of 1:100.

1X10⁶ HeLa cells were intracellularly stained with 0.4 ug CoraLite®555 Anti-Human Thymidylate synthase (CL555-15047) (red), or 0.4 ug Control Antibody. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).
