Informations générales

Stanniocalcin (STC) is a family of secreted glycoprotein hormones that originally discovered in the corpuscles of Stannius, an endocrine gland of fish. STC1 and STC2, two homologues of STC family, are reported to involve in calcium and phosphate homeostasis. It is expressed in a wide variety of tissues such as kidney, spleen, heart, and pancreas. The protein may play a role in the regulation of renal and intestinal calcium and phosphate transport, cell metabolism, or cellular calcium/phosphate homeostasis. STC2 overexpression could promote tumor cell proliferation, invasion and metastasis in prostate cancer, ovarian cancer or neuroblastoma. STC2 is also vital for cytoprotective properties when exposed to ER stress and hypoxia.

Données de validation sélectionnées

Immunofluorescent analysis of (-20°C Ethanol) fixed HeLa cells using CL594-60063 (Stanniocalcin 2 antibody) at dilution of 1:100.

1X10⁶ HeLa cells were intracellularly stained with 0.5 ug Coralite®594 Anti-Human Stanniocalcin 2 (CL594-60063, Clone:4H1E7) (red), or 0.5 ug Control Antibody. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).
