# Anticorps Recombinant de lapin anti- Phospho-AKT1 (Ser473)

Numéro de catalogue:[CL594-80462](#)

## Informations de base

Numéro de catalogue:	Numéro d'acquisition GenBank:	Méthode de purification:
CL594-80462	NM_005163	Purification par protéine A
Taille:	Identification du gène (NCBI):	CloneNo.:
100ul , Concentration: 1000 µg/ml by Nanodrop;		2M10
Hôte:	Nom complet:	Excitation/Emission maxima
Lapin	v-akt murine thymoma viral oncogene homolog 1	wavelengths:
Isotype:	MW observés:	588 nm / 604 nm
IgG	56-62 kDa	

## Applications

Applications testées:

FC (Intra)

Spécificité de l'espèce:

Humain, souris

## Informations générales

AKT is a serine/threonine kinase and it participates in the key role of the PI3K signaling pathway. Phosphatidylinositol-3 kinase (PI3K) is the key regulator of AKT activation. The recruitment of inactive AKT protein to PIP3-rich areas of the plasma membrane results in a conformational change that exposes the activation loop of AKT. AKT's activating kinase, phosphoinositide-dependent protein kinase (PDK1), is also recruited to PIP3 microdomains. PDK1 phosphorylates AKT on threonine 308 (Thr308) of the exposed activation loop, activating AKT and leading to a second phosphorylation of AKT at serine 473 (Ser473) by a kinase presumed to be mTORC2 that further potentiates kinase activity. Active AKT will phosphorylate various downstream protein targets that control cell growth and translational control and act to suppress apoptosis. (PMID: 31594388, PMID: 30808672). 80462-1-RR specifically recognizes AKT1 phosphorylated at Ser473.

## Stockage

Stockage:

Stocker à -20 °C. Éviter toute exposition à la lumière.

Tampon de stockage:

PBS avec glycérol à 50 %, Proclin300 à 0,05 % et BSA à 0,5 %, pH 7,3.

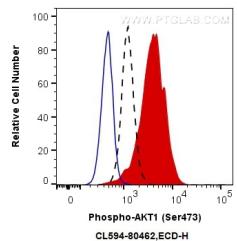

L'aliquotage n'est pas nécessaire pour le stockage à -20°C

\*\*\* Les 20ul contiennent 0,1% de BSA.

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

## Données de validation sélectionnées

$1 \times 10^6$  NIH/3T3 cells untreated (dashed line) or treated with Calyculin A (red) were intracellularly stained with 0.25 ug Coralite® 594 Anti-Human Phospho-AKT1 (Ser473) (CL594-80462, Clone:2M10), or 0.25 ug Control Antibody (Blue). Cells were fixed with 4% PFA and permeabilized with 90% MeOH.
