Informations générales

Stockage

Interleukin-4 (IL-4), a member of the a-helical cytokine family, is produced by activated CD4+ T cells, basophils, and mast cells. It promotes the proliferation and differentiation of antigen presenting cells. IL-4 also plays a pivotal role in antibody isotype switching and stimulates the production of IgE. This cytokine has been applied in the treatment of autoimmune disorder like multiple myeloma, cancer, psoriasis, and arthritis. IL-4 has also been extensively applied to inhibit detrimental effect of Th1. It may promote the growth of epithelial tumors by mediating increased proliferation and survival. (PMID: 24489573;3049907;21663408)

Stockage:
Store at $2-8^{\circ} \mathrm{C}$. Avoid exposure to light. Stable for one year after shipment.
Tampon de stockage:
PBS with $0.09 \%$ sodium azide.

$1 \times 10^{\wedge} 6$ unstimulated or anti-CD3/CD28-stimulated mouse splenocytes were surface stained with
CoraLite® Plus 488 Anti-Mouse CD4. Cells were CoraLite® Plus 488 Anti-Mouse CD4. Cells were
fixed with $4 \%$ PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C), and then intracellularly stained with 0.5 ug CoraLite $®$ Plus 750 Anti-Mouse IL-4 (CL750-65074, Clone:11B11).
