# Anticorps Monoclonal anti-HBE1-Specific

Numéro de catalogue: FITC-66151

## Informations de base

Numéro de catalogue: FITC-66151	Numéro d'acquisition GenBank: NM_005330	Méthode de purification: Purification par protéine G
Taille: 100ul , Concentration: 500 µg/ml by Nanodrop;	Identification du gène (NCBI): 3046	CloneNo.: 2C11G6
Hôte: Mouse	Nom complet: hemoglobin, epsilon 1	Excitation/Emission maxima wavelengths: 494 nm / 520 nm
Isotype: IgG1	MW observés: 16 kDa	

## Applications

Applications testées:  
FC (Intra)

Spécificité de l'espèce:  
Humain

## Informations générales

The hemoglobin molecule is a tetramer consisting of two  $\alpha$ -globin-like polypeptide chains and two  $\beta$ -globin-like chains. The human hemoglobin genes are expressed in a tightly developmentally controlled fashion.  $\epsilon$ -globin (HBE1) is the predominantly expressed gene during the embryonic stage. The epsilon hemoglobin chain seems to be the best marker for fetal nucleated red blood cells (NRBCs). Anti-HBE1 may be used to label and isolate fetal cells from maternal blood and can be useful in prenatal diagnosis. This antibody specifically recognizes the HBE1 and doesn't cross-react with other globin chains. This antibody is conjugated with FITC.

## Stockage

Stockage:  
Stocker à -20 °C. Éviter toute exposition à la lumière. Stable pendant un an après l'expédition.

Tampon de stockage:  
PBS avec glycérol à 50 %, Proclin300 à 0,05 % et BSA à 0,5 %, pH 7,3.  
L'aliquotage n'est pas nécessaire pour le stockage à -20C

**\*\*\* Les 20ul contiennent 0,1% de BSA.**

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

## Données de validation sélectionnées

1X10<sup>6</sup> K-562 cells were intracellularly stained with 0.4 ug FITC Anti-Human HBE1-Specific (FITC-66151, Clone:2C11G6) (red), or 0.4 ug Control Antibody. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).
