For Research Use Only

Glypican 3 Polyclonal antibody

Catalog Number: 11145-1-AP

3 Publications

Basic Information

Catalog Number:

11145-1-AP

150ul, Concentration: 300 µg/ml by 2719 Bradford method using BSA as the

standard:

Rabbit Isotype: IgG

Immunogen Catalog Number:

GenBank Accession Number:

BC035972

GeneID (NCBI):

Full Name: glypican 3

Calculated MW: 580 aa, 66 kDa Observed MW:

66 kDa

AG1433

Applications

Tested Applications:

Cited Applications:

Species Specificity: human, mouse, rat **Cited Species:** human, rat

Purification Method:

Antigen affinity purification

Background Information

Glypicans (GPCs) are a family of glycosylphosphatidylinositol (GPI)-anchored heparan sulphate proteoglycans (HSPGs) that may play a role in the control of cell division and growth regulation. In mammals, there are six GPCs (GPC1 to GPC6), all of which have a similar core-protein size of approx. 60 kDa and the clustering of glycosaminoglycan attachment site near the C-terminus. They are tethered to the cell surface by GPI linkages, which can be cleaved by endogenous phospholipases, thus releasing the protein. Glypican 3 (GPC3) is highly expressed in many tissues during development and plays an important role in the regulation of embryonic growth (PMID: 22467855). Loss-of-function mutations of GPC3 result in the Simpson-Golabi-Behmel overgrowth syndrome (SGBS), and Gpc-3 null mice display developmental overgrowth (PMID: 8589713; 18477453). In hepatocellular carcinoma (HCC), the overexpression of GPC3 has been demonstrated to be a reliable diagnostic indicator (PMID: 19212669; 22706665).

Notable Publications

Author	Pubmed ID	Journal	Application

Storage

Store at -20°C. Stable for one year after shipment.

Storage Buffer:

PBS with 0.02% sodium azide and 50% glycerol pH 7.3.

Aliquoting is unnecessary for -20°C storage

*** 20ul sizes contain 0.1% BSA

Selected Validation Data
