Background Information

Human XPO6 gene encodes a Ran-binding protein 20, exportin-6, belonging to the exportin family. Exportin-6 shuttles between the nucleus and the cytoplasm and mediates the nuclear export of actin and profilin-actin complexes in somatic cells. Interaction of exportin-6 and actin is achieved in a RanGTP-dependent manner, actin is a major cytoskeletal element which is normally kept cytoplasmic by exportin-6 driven nuclear export.
