		C1q and tumor necrosis factor related protein 1(CTRP1), also known as C1QTNF1, is a member of the CTRP superfamily. CTRP1 is a secreted glycoprotein synthesized by a variety of tissues and cells, such as adipose tissue and macrophages. CTRP1 is a paralog of adiponectin. CTRP1 plays a critical role in regulating inflammation and lipid metabolism and acts as a targeted treatment for atherosclerosis, heart failure, hypertension, NAFLD, and diabetes mellitus (PMID: 36812667).
