Background Information

BHLHE41 (basic helix-loop-helix family member e41), also called SHARP1 and DEC2, is a member of the BHLH family proteins that are involved in differentiation, circadian rhythms and the response to hypoxia. In esophageal, osteosarcomas, prostate, breast, and endometrial cancer cells, BHLHE41 functions as an anti-apoptotic factor and promotes cell proliferation and invasiveness. It suppresses cell proliferation and metastasis, and also facilitates pancreatic as well as gastric cancer cell apoptosis. BHLHE41 has an important role in the proliferation of glioblastoma and could serve as a novel candidate for targeted therapy of glioblastoma (PMID: 31616182).
