## Cyclin A1 Polyclonal antibody Catalog Number:13295-1-AP 29 Publications

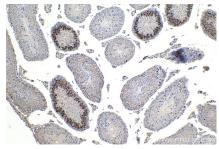

Basic Information	Catalog Number: 13295-1-AP	GenBank Accession Number: BC036346	Purification Method: Antigen affinity purification
	Size: 150ul, Concentration: 187 ug/ml by Bradford method using BSA as the standard;	GenelD (NCBI): 8900	Recommended Dilutions: WB: 1:500-1:1000 IHC: 1:500-1:2000
		UNIPROT ID: P78396	
	Source: Rabbit	Full Name: cyclin A1	
	Isotype: IgG	Calculated MW: 464 aa, 52 kDa	
	Immunogen Catalog Number: AG4005	Observed MW: 52 kDa	
Applications	Tested Applications:	Positive Controls:	
	WB, IHC, ELISA	WB: mouse testis tissue, rat testis tissue	
	Cited Applications: WB	IHC : mouse testis tissue,	
	Species Specificity: human, mouse, rat		
	Cited Species: human, mouse, rat		
	Note-IHC: suggested antigen retrieval with TE buffer pH 9.0; (*) Alternatively, antigen retrieval may be performed with citrate buffer pH 6.0		
	CCNA1 belongs to the highly conserved cyclin family, whose members are characterized by a dramatic periodicity in protein abundance through the cell cycle. CCNA1 binds both CDK2 and CDC2 kinases, which give two distinct kinase activities, one appearing in S phase, the other in G2, and thus regulate separate functions in cell cycle. CCNA1 was found to bind to important cell cycle regulators, such as Rb family proteins, transcription factor E2F-1, and the p21 family proteins. In general, the expression of CCNA1 is tissue-specific and high CCNA1 expression is limited to testis; besides, lower levels of CCNA1 expression are also observed in other human cell lines and in healthy brain. Currently, CCNA1 expression has been illustrated to be downregulated in various tumors, including head and neck squamous-cell cancer (HNSCC) and nasopharyngeal carcinoma; and the promoter of the CCNA1 gen is found to be frequently methylated in colon cancer and HNSCC.		
Background Information	in protein abundance through the cel kinase activities, one appearing in S CCNA1 was found to bind to importa and the p21 family proteins. In gener limited to testis; besides, lower leve healthy brain. Currently, CCNA1 exp head and neck squamous-cell cancer	l cycle. CCNA1 binds both CDK2 phase, the other in G2, and thus nt cell cycle regulators, such as ral, the expression of CCNA1 is t ls of CCNA1 expression are also ression has been illustrated to b r (HNSCC) and nasopharyngeal c	and CDC2 kinases, which give two distinct regulate separate functions in cell cycle. Rb family proteins, transcription factor E2F-1, tissue-specific and high CCNA1 expression is observed in other human cell lines and in be downregulated in various tumors, including

## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 13295-1-AP (Cyclin A1 antibody) at dilution of 1:800 incubated at room temperature for 1.5 hours. Immunohistochemical analysis of paraffinembedded mouse testis tissue slide using 13295-1-AP (Cyclin A1 antibody) at dilution of 1:1000 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

Immunohistochemical analysis of paraffinembedded mouse testis tissue slide using 13295-1-AP (Cyclin A1 antibody) at dilution of 1:1000 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
