Background Information

The SLC22A18/SLC22A18AS genes are a sense-antisense pair located at human chromosome segment 11p15.5. These genes are paternally imprinted: paternal alleles are silenced and maternal alleles are expressed. SLC22A18AS (antisense) is associated to SLC22A18 (sense). These two genes share, in divergent orientations, 31 bp in their 5' regions (between the first exon of SLC22A18AS and the second exon of SLC22A18). This antibody recognizes SLC22A18AS only.

Storage
