Background Information

The M13 family has seven members, including ECEL1 (endothelin-converting enzyme-like 1), one of the newest members. ECEL1 is expressed predominantly in the central nervous system. It has been proposed that the enzyme has a role in the nervous regulation of the respiratory system(PMID:14992683).It may contribute to the degradation of peptide hormones and be involved in the inactivation of neuronal peptides.It has 2 isoforms produced by alternative splicing and 3 glycosylation sites.It can be detected a band of 95kDa in CHO cells by western blot because of the heavily glycosylated(PMID:10961933).
