E twenty-six (ETS)-like transcription factor 1, also known as ELK1, is a member of the Ets family of transcription factors and of the ternary complex factor (TCF) subfamily. It is targeted in the nucleus by three major MAP kinase pathways as well as the CaMKII pathway. phosphorylation of nuclear Elk1 enhances its ability to bind DNA at serum response elements and stimulate transcription of immediate early genes. Elk1 plays important roles in various contexts, including long-term memory formation, drug addiction, Alzheimer's disease, down syndrome, breast cancer, and depression. This antibody got an 62 kd band in western blotting maybe duo to its phosphorylation

Storage:
Store at $-20^{\circ} \mathrm{C}$. Stable for one year after shipment.
Storage Buffer:
PBS with $0.02 \%$ sodium azide and $50 \%$ glycerol pH 7.3.
Aliquoting is unnecessary for $-20^{\circ} \mathrm{C}$ storage
