Background Information

YPEL3 is part of a five-member family of closely related paralogues: YPEL1-5, which are named in reference to their Drosophila orthologue. Studies showed that YPEL3 is regulated by p53 and its encoding protein induces cellular senescence in human tumor and normal cells, indicating that YPEL3 is a p53-dependent, tumor suppressor gene. (PMID:20388804) 15403-1-AP was raised against full length of YPEL3 protein (1-119aa); it can recognize YPEL1-4.
