Background Information

PPP2R1A belongs to the phosphatase 2A regulatory subunit A family. PPP2R1A encodes the α -isoform of the scaffolding subunit of the serine/threonine protein phosphatase 2A (PP2A) holoenzyme. This tumour suppressor complex is involved in growth and survival pathways and PPP2R1A mutations in endometrial high-grade serous carcinomas are a frequent and potentially targetable feature of this disease (PMID: 21381030). The PPP2R1A gene has 86% identity with the PPP2R1B gene (PMID: 7681822).
