## Background Information

NDUFB6, also named as NADH dehydrogenase [ubiquinone] 1 beta subcomplex subunit 6 or Complex I-B17, is a 128 amino acid protein, which belongs to the complex I NDUFB6 subunit family. NDUFB6 localizes in the Mitochondrion inner membrane and is an accessory subunit of the mitochondrial membrane respiratory chain NADH dehydrogenase (Complex I), that is believed not to be involved in catalysis. Complex I functions in the transfer of electrons from NADH to the respiratory chain. The immediate electron acceptor for the enzyme is believed to be ubiquinone.
