Background Information

TBX3, also named as T-box protein 3, is a 743 amino acid protein, which contains 1 T-box DNA-binding domain. TBX3 may localize in the nucleus and is widely expressed in various tissues. TBX3 as a transcriptional repressor is involved in developmental processes and probably plays a role in limb pattern formation. TBX3 plays an important role on osteogenic differentiation and proliferation of human mesenchymal stem cell derived from adipose tissue.
