Background Information

8-oxo-dGDP phosphatase NUDT18, also known as MTH3, belongs to the Nudix hydrolase family that eliminate potentially toxic nucleotide metabolites from the cell and regulate the concentrations and availability of various nucleotide substrates, cofactors, and signaling molecules (PMID: 35732208, 22556419). NUDT18 is specifically active against 8-oxo-dGDP and hardly cleaves 8-oxo-dGTP. NUDT18 is markedly elevated expression in noncancerous cell lines in comparison to cancerous counterpart, and NUDT18 deficient cells have been reported to exhibit a noticeably reduced proliferation rate (PMID: 38944687).
