Background Information

TRPS1, also named as GC79 and LGCR, is a transcriptional repressor. TRPS1 may act to restrict expression of GATA-regulated genes at selected sites and stages in vertebrate development. It might be involved in prostate cancer apoptosis. Defects in TRPS1 are the cause of tricho-rhino-phalangeal syndrome type 1/2/3 (TRPS1) (TRPS2) (TRPS3). The antibody recognizes the C-term of TRPS1.
