Background Information

Sodium-independent purine-selective nucleobase transporter(SLC43A3), also called as equilibrative nucleobase transporter 1(ENBT1), is a nucleobase transporter involved in purine salvage pathways in mammals, which mediates the equilibrative transport of extracellular purine nucleobases such as adenine, guanine and hypoxanthine.(PubMed:26455426, PubMed:32339528) It has been found that it may regulate the transport of fatty acids (FA) in fat cells, as a positive regulator of FA efflux and as a negative regulator of FA uptake.(PMID: 32217606)
