SCN9A/Nav1.7-Specific Polyclonal antibody

Catalog Number:20257-1-AP

7 Publications

Basic Information	Catalog Number: 20257-1-AP	GenBank Accession Number: NM_002977	Purification Method: Antigen affinity purification
	Size: 150ul , Concentration: 400 ug/ml by Nanodrop; Source: Rabbit	GenelD (NCBI):	Recommended Dilutions:
		6335	WB 1:500-1:1000
		UNIPROT ID:	IHC 1:50-1:500
		Q15858	
	Isotype:	Full Name: sodium channel, voltage-gated, type IX, alpha subunit	
	IgG		
		Calculated MW: 226 kDa	
		Observed MW: 226 kDa	
Applications	Tested Applications: WB, IHC, ELISA		Controls:
	Cited Applications:	WB : mouse brain tissue, mouse cerebellum tis brain tissue	
	WB, IF		use brain tissue,
	Species Specificity:		
	human, mouse, pig		
	Cited Species: mouse, rat		
	Note-IHC: suggested antigen retrieval with TE buffer pH 9.0; (*) Alternatively, antigen retrieval may be performed with citrate buffer pH 6.0		
	SCN9A, also named as NENA, PN1, ETHA, NE-NA, Nav1.7 and hNE-Na, belongs to the sodium channel family. SCN9A mediates the voltage-dependent sodium ion permeability of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, SCN9A forms a sodium-selective channel through which Na+ ions may pass in accordance with their electrochemical gradient. It is a tetrodotoxin-sensitive Na+ channel isoform. SCN9A plays a role in pain mechanisms, especially in the development of inflammatory pain. Defects in SCN9A are the cause of primary erythermalgia or autosomal recessive congenital indifference to pain or paroxysmal extreme pain disorder (PEPD). The antibody is specific to SCN9A		
Background Information	mediates the voltage-dependent soc conformations in response to the vol through which Na+ ions may pass in Na+ channel isoform. SCN9a plays a Defects in SCN9A are the cause of pri	lium ion permeability of excitable tage difference across the membr accordance with their electrochen role in pain mechanisms, especia imary erythermalgia or autosoma	e membranes. Assuming opened or closed ane, SCN9A forms a sodium-selective channe nical gradient. It is a tetrodotoxin-sensitive lly in the development of inflammatory pair l recessive congenital indifference to pain or

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 20257-1-AP (SCN9A/Nav1.7-Specific antibody) at dilution of 1:500 incubated at room temperature for 1.5 hours. Immunohistochemical analysis of paraffinembedded mouse brain tissue slide using 20257-1-AP (SCN9A/Nav1.7-Specific antibody) at dilution of 1:200 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
