## Background Information

The family of INS receptor substrates (IRS) consists of four proteins (IRS-1-IRS-4), which were initially characterized as typical cytosolic adaptor proteins involved in INS receptor (IR) and INS-like growth factor I receptor (IGF-IR) signaling. Impaired glucose tolerance and INS resistance, and thus type 2 diabetes were demonstrated in *Irs2* knockout mice. In vivo data also indicated that the regulation of beta-cell mass involves IRS2, while IRS1 is only required for proper INS production in beta-cells. IRS2, like IRS1, has a predicted molecular weight of 137 kDa, however, as a result of its extensive serine phosphorylation it separates on a SDS-PAGE as a band of approximately 150-185 kDa.

## Selected Validation Data

mouse brain tissue were subjected to SDS PAGE followed by western blot with 20702-1-AP (IRS2 antibody) at dilution of 1:500 incubated at room temperature for 1.5 hours.

Immunohistochemical analysis of paraffin-embedded mouse skeletal muscle tissue slide using 20702-1-AP (IRS2 antibody) at dilution of 1:200 (under 10x lens).
