Background Information

VSIG2, also known as CTXL (cortical thymocyte-like protein), belongs to the V-Set and immunoglobulin (Ig) domain-containing (VSIG) family. The VSIG family is also a member of the immunoglobulin superfamily (IgSF). VSIG2 has been recognized as a novel immune checkpoint that plays a role in regulating immune response. VSIG2 was associated with the development and progression of colon adenocarcinoma (COAD) and pancreatic ductal adenocarcinoma (PDAC) and could be used as a potential biomarker (PMID: 34290531; PMID: 37626304).
