## Background Information

SLC39A2 (hZIP2) is a human zinc importer in the ZIP family, which is essential in the maintenance of intracellular zinc homeostasis and is upregulated by zinc depletion. SLC39A2 is highly expressed in prostate epithelial cells and is involved in prostate cancer development. Most SLC39 proteins consist of eight transmembrane domains (TMDs), with extracellular or intravesicular amino and carboxy termini (PMID: 34790705). Zip2 gene knockout exacerbated myocardial I/R injury, whereas Zip2 gene transfer reduced myocardial infarction (PMID: 31095941). The predicted molecular weight of SLC39A2 is 33 kDa, and a band of dimers at 66 kDa can also be detected by this antibody (PMID: 24619115).

## Selected Validation Data

Immunohistochemical analysis of paraffin-embedded Colorectal cancer slide using 21287-1-AP (SLC39A2 antibody) at dilution of 1:100 (under 20x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 21287-1-PBS in a different storage buffer formulation.

Various lysates were subjected to SDS PAGE followed by western blot with 21287-1-AP (SLC39A2 antibody) at dilution of 1:500 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 21287-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded mouse brain tissue slide using 21287-1-AP (SLC39A2 antibody) at dilution of 1:200 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 21287-1-PBS in a different storage buffer formulation.
